| - Agenda approval and minutes from 3/9/2020 | |
| - Check in and next steps for SLOAC for spring: How does COVID-19 and move online impact spring plans for PSLO mapping and CSLO assessment? Plans for next steps | Factors to keep in mind right now w/ decision on SLO assessment proceeding this spring despite COVID-19 interruptions: -high student drop rate right now; some can't deal w/ the tech -variation by department -new methodology very quickly -info for how to navigate challenging times -benefit from increased technology -help us be better teachers -time intensive making the transition -eLUMEN does have capacity to pull data over the course of the semester -be prepared for future disruptions -importance w/ bandwidth -eLUMEN alerts eliminated CSLO assessment for spring: |

- There may be added value in assessing SLOs this semester, in part b/c this may not be only semester of disruption; good feedback for our teaching practices. But the transition online will have affected everyone differently depending on their starting place, and some may not have bandwidth for this. Also some classes will be more impacted by sudden change online than others.
- We will keep the assessment schedule as planned but we'll send a letter to divisions late April to share thoughts on value of SLO assessment but balance w/ capacity/bandwidth. Ultimately it is up to departments/faculty to decide how to accomplish 3 year assessment plan, and faculty can determine if they need to update/change the assessment plan due to disruption this spring.

PSLO mapping:

- SLOAC will focus on building the Excel mapping tools and/or accurate eLUMEN reports to share w/ departments when we feel they have the bandwidth.
- Chairs/departments likely have less bandwidth now and harder for us to sit down with them. We have to have these degrees/certificates mapped by midterm report March 2021 but may need to wait for summer/fall for some areas to be mapped, even if that means we won't be able to aggregate data for those that aren't mapped this spring.
- Triage -- Focus on AA-Ts and AS-Ts, in connection with DART this spring; reschedule April 8 IVC meeting until late April/early May and ideally have Health Sciences/CE mapped after this meeting.

-Logan will turn off eLUMEN alerts and check workflows for POR revisions

- Cara will contact Gina and Cari w/ DART to see if that connections would be helpful w/ PSLO mapping

-Care will draft a letter for faculty to send out late April/May
